

Track

Construction, Maintenance and Rehabilitation

North America's leader in Track and Transit & Systems construction and maintenance services

TRUST YOUR TRACK TO THE TEAM FOR ALL SEASONS

RailWorks provides a full range of track construction, maintenance and rehabilitation services across North America. Through a regional network of more than 25 field offices, we mobilize quickly to effectively perform railroad and rail-transit projects, including design support, procurement, project management and subcontractor operations.

The Industry's Most Experienced RAIL CONTRACTOR

MARKETS

- Class I, short line and regional railroads
- Transit and commuter rail lines
- Ports, waterways and utilities
- Industries served by rail

TRACK EXPERTS

ALL TYPES

- Ballasted
- Direct fixation
- Crane rail
- Embedded track
- Special trackwork, all sections and sizes

ALL ENVIRONMENTS

- Grade crossings
- Bridges
- Elevated structures
- Tunnels
- Rail car dumpers
- Weight scales
- Mines, quarries and ports

New Construction

RailWorks will manage, construct and supply materials for multidisciplinary greenfield and capacity expansion projects, providing turnkey service as a general contractor or subcontractor:

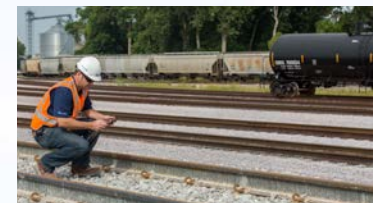

- Design-build and bid-build capabilities
- Site selection and preparation – grading, drainage, sub-ballast
- Track construction of all types
- Panelized turnout and crossover construction and installation

Rehabilitation

RailWorks is a complete resource for outsourcing large and small rehabilitation projects, often in conjunction with live operations:

- Track take-up and rehabilitation
- Track reconfiguration and alignment

Inspection, Maintenance, Emergency Response

Protect your track investment with these preventive services designed to eliminate safety risks and repairs and minimize the chance of a track outage:

- Basic, routine inspection
- Baseline track inspection, including a diagram of your track infrastructure
- Scheduled maintenance program for industrial complexes and railways, with option for dedicated, 24/7 crews
- Emergency response 24/7, even on holidays

Crossings

RailWorks constructs and maintains grade crossings for new installations and existing systems:

- All types of crossings: timber, asphalt, pre-cast concrete panels, full-depth concrete modules, rubber and Epflex®
- Phased construction or outage planning
- Subcontractor coordination for traffic control, detours, paving, concrete, drainage, pipe installation, earthwork and subgrade preparation
- Warning device installation, including flashers, lights and gates
- Warning and wayside services for new installations and existing systems

Bridges

RailWorks' dedicated bridge division provides turnkey services to help ensure railway bridges meet FRA/Transport Canada requirements:

- Timber bridge construction
- Ongoing inspection and maintenance services
- Demolition and new construction

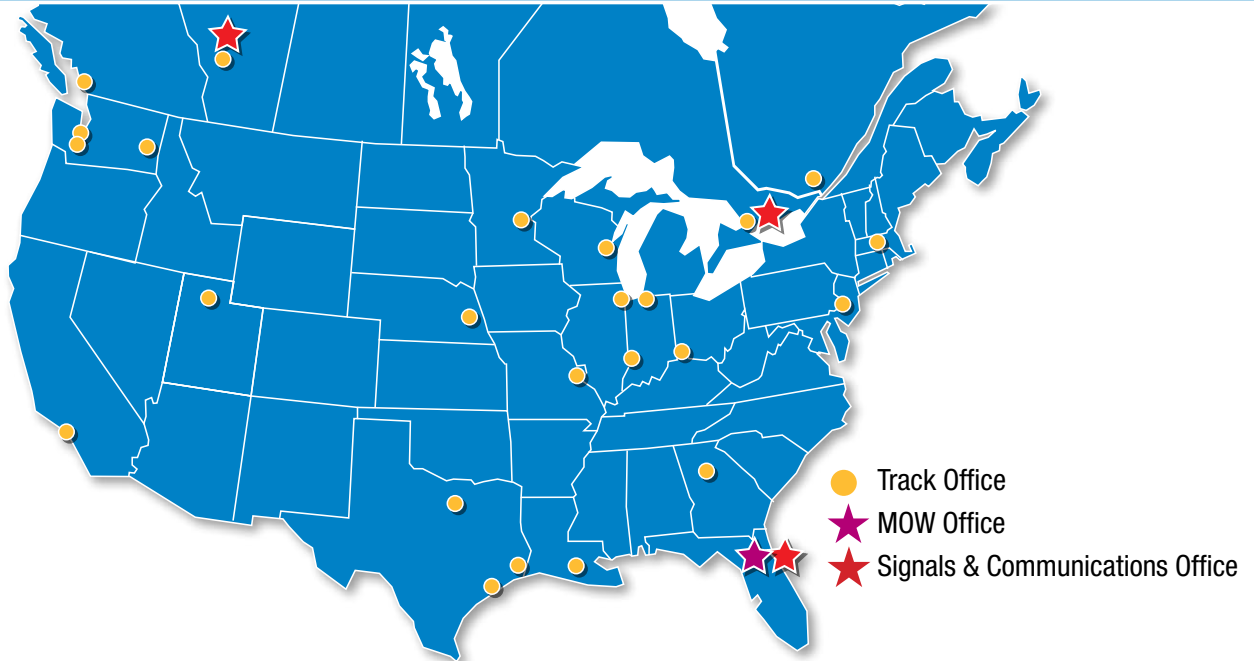

MOW Services

RailWorks offers these maintenance-of-way services specifically for Class I and regional railroads with demanding operating requirements:

- Rail and tie production teams
- Thermo and electric field welding
- Rail grinding
- Track Geometry Testing
- Production Undercutting
- Shoulder ballast and mechanized yard cleaning
- Roadway worker in charge (RWIC) railroad flagging services
